

Orbital Therapy installs ClearVue™ Prone Breast Table at Massachusetts General Hospital

Bedford, MA, July 15, 2009 – Orbital Therapy announces the delivery of ClearVue™ prone breast table to the Massachusetts General Hospital, Boston, MA.

Orbital Therapy's all carbon fiber ClearVue™ prone position table addresses current and future requirements to deliver this emerging therapy technique. Placing the patient in the prone position reduces target motion, increases the separation between the target anatomy and critical structures such as lung and heart, and allows for better localization of the treatment area.

"MGH has been a pioneer in the area of radiotherapy and we are excited to have ClearVue™ prone breast table used at this facility.", said Alan Sliski, CTO of Orbital Therapy.

ClearVue™ offers a number of advantages over other commercially available prone position tables. Our unique, patent-pending open design provides visual and treatment access to the breast, allowing the physician to plan and treat from multiple angles.

The interchangeable mid-section allows you to quickly adjust the table configuration between various inserts, available in a number of different sizes and shapes. There is also an option for users to design their own custom inserts.

About Orbital Therapy, LLC

Orbital Therapy was founded in 2006 to develop products for the treatment of breast cancer. Our innovative approach to the treatment of this particular disease will offer numerous benefits over currently used techniques and provide many benefits to the patient, as well as the care provider.
